

USER HANDBOOK · SPRINT 3 SUPPLEMENT

HR & Payroll Management Platform

Sprint 3 New Features

A practical, step-by-step guide to what Sprint 3 added across all three waves: a public careers page and candidate self-service, polygon geofence zones, SMS & push notifications, standalone reimbursement, Google Calendar sync, asset management, performance reviews, learning & courses, bank disbursement files, and the HR Assistant.

COMPANION DOCUMENT

This handbook only covers what Sprint 3 changed or added. For login, roles, and the core Attendance / Leave / Overtime / Payroll / Employees / Organization Settings workflows, see *HR_Payroll_User_Handbook.pdf* (Sprint 1). For geofenced attendance, expense claims, notifications, and recruitment/ATS basics, see *HR_Payroll_Sprint2_User_Handbook.pdf* (Sprint 2) — those all still work exactly as documented there.

Audience: All staff, plus the new external Candidate identity

Covers: Careers & Candidate Portal, Polygon Geofence, SMS/Push, Standalone Reimbursement, Calendar Integration, Assets, Performance Reviews, Learning, Bank Disbursement Files, HR Assistant

Version: 3.0 | September 2026

What's New in Sprint 3

Sprint 3 is the platform's biggest release yet, shipped in three independently-delivered waves: a recruitment and attendance/ops wave, a people-development wave, and a finance/AI wave. Nothing from Sprint 1 or Sprint 2 changed behavior — everything below is additive.

FEATURE	WHAT IT DOES	WHO NOTICES IT
Careers page & candidate portal	Candidates browse open jobs at a public link and apply themselves, then track their own application	Candidates; HR publishes it
Polygon geofence zones	A geofence zone can now be drawn as an irregular shape on a map, not just a circle	HR configures; Office employees
SMS & push notifications	Notifications can reach you by text message or a phone/browser push, not just email and in-app	Everyone
Standalone reimbursement	HR can mark an approved expense claim reimbursed right away, without waiting for a payroll run	HR Admin; employees get paid sooner
Google Calendar integration	Scheduling an interview can automatically create an event on a connected Google Calendar	HR Admin; interviewers
Asset management	Company equipment (laptops, phones, monitors, etc.) is tracked, assigned to employees, and returned	Everyone; HR Admin manages the register
Performance / KPI reviews	Periodic review cycles with a self-assessment and a manager assessment	Everyone; managers of direct reports
Learning	A course catalog employees browse, self-enroll in, and mark complete themselves	Everyone; HR manages the catalog
Bank disbursement file export	HR downloads a CSV of payments to upload to their bank's own portal	HR Admin
HR Assistant	A chat assistant that answers questions about your own leave, attendance, payslips, and more	Everyone

A new kind of user: Candidate

Sprint 3 doesn't add a new internal role — Employee, Hiring Manager, HR Admin, and Super Admin are unchanged. Instead, it introduces **Candidate**, a completely separate external identity with its own sign-in at the public careers page:

- A candidate account is not an internal user and never appears in your organization's **Employees** list or role table.
- Candidates sign in at your organization's public careers link, never at the regular staff login page.
- A candidate can only ever see their own applications — never your internal Recruitment pipeline, other candidates, or any compensation/offer detail beyond their own status.

NOTE

Everything from the Sprint 1 and Sprint 2 handbooks — logging in, the four internal roles, navigation basics, geofenced attendance, expense claims, in-app notifications, and internally-entered recruitment — still applies unchanged. This document only adds what's new in Sprint 3.

Careers Page & Candidate Portal

Sprint 2's recruitment pipeline was entirely internal — every candidate was added by HR. Sprint 3 opens a public front door: a careers page anyone can browse, and a self-service portal candidates use to apply and follow their own application.

Publishing your careers page **HR ADMIN**

Each organization can turn on a public careers link. Once it's set, every job posting with status **OPEN** appears on that public page automatically — salary bands and any other internal field are never shown, and the page shows nothing at all for an organization that hasn't set one up.

- Postings you create the same way as in Sprint 2 (**Recruitment** → **Postings**) still work unchanged — publishing is automatic for any **OPEN** posting once your careers link is turned on.
- **DRAFT** , **CLOSED** , and **ARCHIVED** postings never appear publicly, exactly like before.

NOTE

A candidate-submitted application goes through the exact same pipeline rules as one you enter yourself — the same duplicate-application check and the same one-active-offer-at-a-time rule from Sprint 2 apply either way.

Applying as a candidate **CANDIDATE**

Candidates never use your organization's regular staff login. They use your organization's public careers link instead:

- 1 On the **Open positions** page, a candidate opens any job to see its detail page and selects **Apply** .
- 2 If they don't already have an account, they use the **Register** tab (Full name, Email, Password) on the sign-in screen; a returning candidate uses **Sign in** instead.
- 3 They can optionally attach a resume, then confirm — the application enters your pipeline at stage **APPLIED** , exactly like an HR-entered one.

IMPORTANT

There's no email verification or password reset for candidate accounts in this release — the same gap that exists for internal accounts today. A candidate who forgets their password needs to register again with a different address, or ask HR to re-enter their application manually.

Tracking an application CANDIDATE

Once signed in, a candidate lands on **My applications** — every application they've submitted to your organization, with its current stage:

WHAT THE CANDIDATE SEES	MEANING
Applied	Submitted, not yet reviewed
Screening	Under initial review
Interview	Interview stage reached
Offer	An offer has been sent
Hired	Offer accepted and converted — final
Not selected	Declined by HR/Hiring Manager — final
Withdrawn	The candidate withdrew — final

Opening an application from this list shows its **Interviews** section (once one is scheduled — date and format, but never the interviewer's private feedback or score) and its **Offer** section (once one is sent — status only). A candidate selects **Sign out** from the header when done.

TIP

What a candidate sees is deliberately limited: interviewer identity, interview feedback/score, and offer compensation detail are never shown on the candidate side — only stage, schedule, and outcome. HR and the assigned Hiring Manager still see the full detail on the internal Recruitment pages, exactly as in Sprint 2.

Polygon Geofence Zones

Sprint 2 added geofenced attendance with circular zones only. Sprint 3 adds a second shape — an irregular area you draw directly on a map — for sites a single circle doesn't fit well.

Drawing a polygon zone HR ADMIN

Open **Settings** → **Geofence**, the same tab used in Sprint 2.

- 1 Under "Geofence zones," select **New zone**.
- 2 Enter a **Label**, then choose **Shape**: **Circle (center + radius)** — the Sprint 2 option, unchanged — or **Polygon (draw on map)**.
- 3 For a circle, fill in **Radius (meters)**, **Latitude**, and **Longitude** exactly as before.
- 4 For a polygon, click directly on the map to place each vertex — a helper line under the map counts them ("*n point(s) — click the map to add a vertex (3-50 required)*"). Use **Remove last** to undo a point or **Clear** to start over.
- 5 Select **Add zone** to save it.

The zone table now has a **Shape** column; a polygon zone summarizes as "Polygon — n points." Existing circular zones from Sprint 2 needed no changes and keep working exactly as documented there — deactivating a zone, the **ACTIVE** / **INACTIVE** status, and the ability to define multiple zones all work identically for both shapes.

NOTE

Nothing changes for Office employees checking in — location capture and the Geofence policy (None / Log only / Geofence enforced) from Sprint 2 apply the same way regardless of a zone's shape. Being inside *any* active zone, circular or polygon, passes the check.

SMS & Push Notifications

Sprint 2 gave every user an in-app inbox and optional email copies. Sprint 3 adds two more delivery channels — text message and push — to the same set of events (leave decided, expense decided, interview scheduled, and the rest from the Sprint 2 catalog).

Delivery settings EMPLOYEE

Open **Notifications** (the bell icon in the header) to reach **Delivery settings**, below your inbox.

- **Phone number** — enter it in E.164 format (e.g. **+959123456789**) and select **Save** . SMS delivery is only possible once a phone number is on file.
- **Push** — select **Enable push notifications** to grant your browser permission; the button switches to **Disable push notifications** once it's on. If your browser doesn't support push, you'll see a plain notice instead of the toggle.
- For each event type, you can choose which of **Email**, **SMS**, and **Push** also notify you — the same per-event checklist from Sprint 2, now with two extra columns.

NOTE

In-app notifications still can't be turned off, exactly as in Sprint 2 — the bell and inbox always show every event that concerns you. Email, SMS, and push are the channels you control.

What to expect

- A text message is short — a link or reference only, never a balance, amount, or other sensitive detail — the same privacy rule Sprint 2 applied to notification emails.
- If a text or push message fails to send (for example, an invalid number), it never blocks the other channels — your in-app notification and any email you've enabled still arrive normally.

TIP

If you're not receiving SMS, double-check your phone number is saved under Delivery settings and in the correct international format. If push notifications stop arriving after you clear your browser data, just select **Enable push notifications** again.

Standalone Reimbursement

In Sprint 2, an approved expense claim was only ever paid as part of the next payroll run covering its date. Sprint 3 adds a second, independent way to pay it — useful when a claim shouldn't wait for the next pay cycle.

Paying a claim directly HR ADMIN

On the **Expenses** page, any **APPROVED** claim now shows a **Mark reimbursed** action alongside the existing **Approve** / **Reject** buttons for submitted ones.

- 1 Select **Mark reimbursed** on an Approved claim.
- 2 You'll be asked for a disbursement method (bank transfer, cheque, cash, or other) and a reference — enter what you actually used to pay the employee.
- 3 The claim immediately moves to **REIMBURSED**.

The **Download disbursement file** button on this same page is covered in **Section 10 — Bank Disbursement File Export**; it's a related but separate action that only produces a CSV to take to your bank, and does not itself mark anything reimbursed.

IMPORTANT

A claim can only be paid one way. Once you've used **Mark reimbursed** on it, it's excluded from every future payroll run's automatic reimbursement matching — and a claim payroll has already reimbursed can't be marked reimbursed again this way. The two paths never double-pay the same claim.

NOTE

Everything else about expense claims — submitting, receipts, categories, approving/rejecting, and the automatic payroll-cycle reimbursement path — works exactly as documented in the Sprint 2 handbook. This is purely a second, faster option for HR.

Google Calendar Integration

Sprint 2 tracked interviews with a free-text interviewer list and no calendar link. Sprint 3 can create a real Google Calendar event automatically whenever an interview is scheduled, updated, or cancelled.

Connecting Google Calendar HR ADMIN

Open **Settings** → **Organization** to find the **Google Calendar** section.

- 1 Select **Connect Google Calendar**. You're redirected to Google to sign in and grant access.
- 2 On success, the section shows **Connected** along with which account and when it was connected.
- 3 To stop syncing, select **Disconnect** — the status returns to **Not connected**.

NOTE

This is one connection for your whole organization, not one per interviewer — a single HR Admin authorizes a shared calendar that every scheduled interview writes to.

Scheduling an interview HR ADMIN HIRING MANAGER

Nothing changes about how you schedule, reschedule, or cancel an interview on the application detail page — you still fill in date/time, format, and interviewers. The only difference is what happens behind the scenes:

- With Calendar **connected**, a calendar event is created (and kept in sync on reschedule or cancellation) automatically.
- With Calendar **not connected**, interviews work exactly as they did in Sprint 2 — a structured interviewer list, no calendar event. Nothing is blocked either way.
- If Google is temporarily unreachable when you schedule, the interview still saves; you'll just see a warning that the calendar event couldn't be created.

Asset Management

A new **Assets** item appears in the sidebar for everyone — it tracks company equipment (laptops, monitors, phones, peripherals, furniture, and anything else) as it's assigned to and returned by employees.

Managing the register **HR ADMIN**

HR sees the **Asset register** — every asset in the organization.

- Register a new item with a unique **asset tag** and a **category** (Laptop, Monitor, Phone, Peripheral, Furniture, or Other). A new asset starts **AVAILABLE**.
- Select **Assign** on an Available asset and choose an employee — it moves to **ASSIGNED** and appears on that employee's own asset list.
- Select **Return** once the employee gives it back — it clears the assignment and returns the asset to **AVAILABLE**.
- Select **Retire** to take an item permanently out of circulation (**RETIRED**), or mark it **IN_REPAIR** while it's out of service.

NOTE

An asset can only become Assigned through the Assign action — there's no way to set that status directly, which is what keeps "who has what" from ever drifting out of sync. Every assign/return is kept as history you can review later.

Your equipment **EMPLOYEE**

Open **Assets** to see **My assets** — everything currently assigned to you. There's nothing for you to do here beyond taking care of the item; HR handles assignment and returns.

Performance / KPI Reviews

A new **Performance** item runs periodic review cycles: HR opens a cycle, every active employee gets a review with a self-assessment half and a manager-assessment half.

Running a review cycle **HR ADMIN**

- 1 Under **Review cycles**, create one with a period start and end date. It starts **DRAFT**.
- 2 Select **Open** when you're ready to start it. This creates one review for every then-active employee and moves the cycle to **OPEN**.
- 3 Once the period is over, select **Close**. The cycle becomes **CLOSED** and no further self- or manager-reviews can be submitted for it.

IMPORTANT

Opening a cycle only creates reviews for employees who are active at that moment — someone who joins later in the period won't have a review for that cycle.

Setting a manager **HR ADMIN**

A review's manager section is completed by whoever is set as that employee's manager on their profile. If no manager is set, an HR Admin can stand in and submit that section instead.

Completing your review **EMPLOYEE**

Under **My reviews**, open any review from an open cycle to reach its detail page.

- Fill in **Self rating** and comments/goals under **Self-review**, then select **Submit self-review**. This is a one-time action — once submitted, it's locked and shows the date it was submitted.
- You don't need to wait for your manager, and they don't need to wait for you — the two halves are independent.

Reviewing a direct report **MANAGER**

If you're set as someone's manager, their review appears under **All reviews** alongside your own, even though "Manager" isn't a separate role in this platform — it's just whoever is on file as that person's manager. Fill in **Manager rating** and comments under **Manager review**, then select **Submit manager review**. Like the self-review half, this locks once submitted.

NOTE

A review's overall state — Pending, Self-submitted, or Completed — is simply whichever of the two halves have been submitted so far; there's nothing to set manually. **PENDING** means neither half is in yet, **SELF_SUBMITTED** means only the employee has submitted, and **COMPLETED** means both have.

Goals are a free-text field for the period — there's no separate goal-tracking list in this release, just a place to record what was agreed for next time.

Learning

A new **Learning** item hosts a lightweight course catalog. Courses are links to existing external training material — nothing is hosted inside the platform — and completion is self-reported.

Managing the catalog **HR ADMIN**

- Under **Manage courses**, add a course with a title, a link, an optional category, and whether it's **Mandatory**.
- Select **Enroll all active** to enroll every active employee in one step — useful for a mandatory compliance course. Anyone already enrolled is skipped, and you'll see a confirmation of how many were newly enrolled.
- Retiring an outdated course keeps its history without deleting past enrollments.

Taking a course **EMPLOYEE**

- 1 Browse the **Course catalog** — items marked **Mandatory** stand out from optional ones.
- 2 Select **Enroll** on anything you want to take (or that HR has already bulk-enrolled you in).
- 3 Once you've actually completed it, select **Mark complete** yourself — the entry then shows **Completed**.

NOTE

There's no manager sign-off or quiz — completion is entirely on the honor system, tracked so HR (and you) can see who's finished what, especially for mandatory courses.

Bank Disbursement File Export

There's no live connection to a bank in this platform — instead, HR can download a CSV file listing what needs to be paid and upload that file to your own bank's portal.

Payroll payouts HR ADMIN

Once a payroll run reaches **APPROVED** or **PAID**, its detail page shows **Download disbursement file**. The CSV has one row per employee in that run, with their net pay and bank details.

Expense payouts HR ADMIN

On the **Expenses** page, the same **Download disbursement file** button produces a CSV of every **APPROVED** claim that isn't already part of a payroll run — the ones eligible for standalone reimbursement (Section 5).

IMPORTANT

Downloading either file is read-only — it does not mark anything paid. After uploading it to your bank and confirming the payout, HR still selects **Mark reimbursed** (expenses) or otherwise records payroll as paid, exactly as before.

Bank details on an employee's profile HR ADMIN

The employee detail page has a new **Bank details** section — **Bank name**, **Bank account name**, and **Bank account number**. These are blank until HR fills them in, and a blank field simply appears empty in the exported CSV rather than causing an error.

HR Assistant

A new **HR Assistant** item gives everyone a chat assistant that answers questions about their own HR data — leave balance, attendance, payslips, expenses, assets, reviews, and courses.

Asking a question **EMPLOYEE**

Type a question in the message box (placeholder: *"Ask about your leave, attendance, payslips, expenses..."*) — for example, "What's my current leave balance?" or "Do I have any pending expense claims?" The assistant answers using a fresh snapshot of your own records each time you ask.

NOTE

"The assistant only sees your data and can't take actions on your behalf" — this is shown directly on the page. It can't submit a leave request, approve anything, or change any record; it only answers questions.

Same rule for HR Admins **HR ADMIN** **SUPER ADMIN**

Even for an HR Admin or Super Admin, the assistant only ever answers from *your own* employee data — it deliberately never uses your role's usual org-wide access. To ask about someone else's records, use the regular Employees/Payroll/Attendance pages as you always have.

TIP

Nothing you type here is saved on the server — your conversation only exists in your browser for that session. If the assistant isn't configured for your organization yet, you'll see a clear message saying so instead of a broken chat.

Roles & Permissions (Updated)

The four internal roles from Sprint 1/2 are unchanged. Here's what Sprint 3 adds for each, plus the new external Candidate identity.

AREA	EMPLOYEE	HIRING MANAGER	HR ADMIN	SUPER ADMIN
Careers page setup	—	—	Full	Full
Candidate applications	—	Assigned only	Full	Full
Geofence shape & zones	—	—	Full	Full
SMS / push settings	Own only	Own only	Own, plus templates	Full
Standalone reimbursement	—	—	Full	Full
Calendar integration	—	—	Full	Full
Assets (my own)	View own	View own*	Full register	Full
Performance reviews	Own, plus reports if a manager	Own, plus reports if a manager	Full	Full
Learning / courses	Browse, self-enroll, own progress	Same as Employee	Full catalog + bulk enroll	Full
Bank disbursement files	—	—	Full	Full
Employee bank details	—	—	Full	Full
HR Assistant	Own data only	Own data only*	Own data only	Own data only

* A Hiring Manager has no employee record, so in practice it has no assets, performance review, or HR Assistant data of its own — same footnote as Sprint 2's expense claims.

Candidate CANDIDATE

AREA	WHAT A CANDIDATE CAN DO
Job postings	Browse Open postings on the public careers page only
Applications	Submit new ones; view only their own, field-filtered (no interviewer, feedback, or compensation detail)
Everything else	No access — a candidate account cannot sign in to the internal application at all

"Manager" is not a role

NOTE

Being able to complete a direct report's performance review doesn't come from a role — it comes from being listed as that employee's manager on their profile (set by HR). An Employee, and even a Hiring Manager, gets this ability automatically the moment HR assigns them as someone's manager; it is not a separate permission to grant.

Force-scoping, in plain terms

Every "view my own" list in this handbook — assets, performance reviews, courses, and the HR Assistant's snapshot — works the same underlying way: if you're not an HR Admin or Super Admin, the system automatically narrows any list to your own employee record, no matter what you ask for. This is what makes it structurally impossible for an Employee (or the Assistant, on anyone's behalf) to see another employee's data through these screens.

Status Glossary

New status labels introduced in Sprint 3. All Sprint 1/2 statuses (leave/overtime requests, employees, departments & positions, payroll runs, geofence zones, expense claims, job postings, application stages, interviews, offers) are unchanged.

Geofence zones

FIELD	VALUES
Shape	Circle · Polygon — which kind of area the zone covers; both use the same ACTIVE/INACTIVE status from Sprint 2

Candidate application stage (candidate-facing)

STAGE	MEANING
Applied	Starting point when a candidate applies
Screening	Under initial review
Interview	Interview stage reached
Offer	An offer has been sent
Hired	Converted into an employee account — final
Not selected	Declined — final (shown internally as REJECTED)
Withdrawn	Candidate withdrew — final

NOTE

HR and Hiring Managers still see the internal stage names (**REJECTED** , etc.) on the Recruitment pages — the candidate portal simply relabels the same stage as "Not selected" for a gentler candidate-facing message.

Assets

STATUS	MEANING
AVAILABLE	Not currently assigned to anyone
ASSIGNED	Currently with an employee
IN_REPAIR	Temporarily out of service
RETIRED	Permanently out of circulation; kept for history

Performance review cycles

STATUS	MEANING
DRAFT	Created but not yet opened; no reviews exist yet
OPEN	Reviews created for every then-active employee; self/manager submission allowed
CLOSED	Period ended; no further submissions accepted

Individual performance review (derived, not set manually)

STATUS	MEANING
PENDING	Neither the self- nor the manager-review has been submitted
SELF_SUBMITTED	The employee has submitted; the manager section is still open
COMPLETED	Both halves have been submitted

Courses

STATUS	MEANING
ACTIVE	Currently available in the catalog
ARCHIVED	Retired; kept for history, hidden from new enrollment

Course enrollment (derived, not set manually)

STATUS	MEANING
ENROLLED	Signed up, not yet marked complete
COMPLETED	The employee has marked it complete themselves

Frequently Asked Questions

"I'm a candidate — how do I apply for a job?"

Use the organization's public careers link (ask them for it, or find it on their website) — not the regular staff login. From there you can browse open positions, register or sign in, and apply.

"Why don't I see a Careers option in my sidebar?"

The careers page is a public page outside the app, not an internal navigation item — internal Recruitment (Pipeline/Postings/Hiring Managers) still works exactly as in Sprint 2 for HR, Super Admins, and Hiring Managers.

"Can I draw a non-rectangular geofence zone?"

Yes — choose **Polygon (draw on map)** when creating a zone and click as many points as you need (3 to 50) to trace the exact shape of your site.

"I didn't get an SMS or push notification — why?"

For SMS, check that a phone number is saved under Delivery settings. For push, make sure you selected **Enable push notifications** and that your browser supports it. Either way, your in-app notification and any enabled email still arrive regardless.

"HR marked my expense reimbursed without waiting for payroll — is that normal?"

Yes. HR can now pay an approved claim directly at any time using **Mark reimbursed**, instead of only through the next payroll run. Either way, your claim ends up **REIMBURSED** — it's just a faster path.

"Why didn't my interview show up on Google Calendar?"

Your organization hasn't connected Google Calendar yet, or the connection needs to be re-authorized. Ask your HR Admin to check **Settings** → **Organization**. Either way, the interview itself is still scheduled correctly.

"Can I see who currently has a piece of equipment?"

HR Admins can see this in the Asset register. As an employee, you can only see equipment currently assigned to you, under **My assets**.

"What happens to my performance review if I don't have a manager assigned?"

Your self-review works the same either way. The manager section is left for an HR Admin to complete instead, since there's no one on file to do it.

"Do I have to complete every course in the catalog?"

Only ones marked **Mandatory** are expected of you; everything else is optional. Either way, completion is self-reported — select **Mark complete** once you've actually finished it.

"Can I trust the numbers the HR Assistant gives me?"

The assistant is instructed to answer only from your actual data snapshot and never invent numbers — but like any assistant, treat it as a convenient summary, not a substitute for checking your Payslips, Attendance, or Leave pages directly for anything you need to act on.

"Can the HR Assistant submit a leave request or approve something for me?"

No. It can only answer questions about your own data — leave balance, attendance, payslips, expenses, assets, reviews, and courses. It never takes any action, and it never has access to anyone else's data, even if you're an HR Admin asking it.

"I'm an HR Admin — why does the Assistant only show my own data?"

This is deliberate. The Assistant always answers from the asking person's own employee record, regardless of your role's normal org-wide access elsewhere in the app — it's designed this way so it can never be used to pull up another employee's information.

"Where do I put an employee's bank details for disbursement?"

On that employee's detail page, under the new **Bank details** section (HR Admin only). Once saved, they'll populate automatically the next time you download a disbursement file.
